

Premier Brick

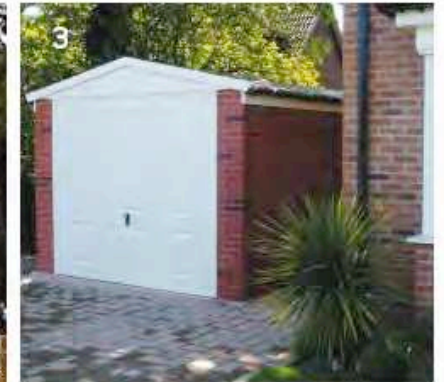

Premier Brick gives you the classic beauty of brick but without the cost. It really does look like the real thing. All you miss is the hassle, mess and long timescales for building that are all too common with expensive brick garages.

It's Compton's innovative design that makes Premier Brick look so authentic. You simply won't see panel joint marks. Years of research and development backed by intensive testing ensures it stands up to the closest scrutiny.

You can choose from four sculptured brick finishes - red, deep red, brown or buff with or without accent colours. Standing at 7ft to the eaves, the Premier Brick provides extra height as standard and provides a real feeling of spaciousness. The 1.97m (6'5") door clearance height is also ideal for taller vehicles.

The Premier Brick can be designed to suit your requirements as the full range of Compton options is available including a range of roof colours, door and window choices, adding an electrical power pack and internal shelving.

Prior to installation a survey will be conducted by a Compton expert, then the shell of your garage will be installed before the expert team apply the Premier Brick finish, leaving you with a building that looks just like a real brick garage.

Opposite: Premier Brick Red Brick 2.74m (9'0") wide with Cedar up and over and personnel doors and terracotta Roof sheets. 2. Premier Brick Buff brick with rosewood PVCu window and personnel door. 3. Premier Brick Red Brick with Georgian style door and white PVCu fascia. 4. Premier Buff Brick with Golden Oak wood grain finish door and fascia.
